

ABSTRACT

The use of urocanic acid or another pharmaceutically acceptable agent being able to acidify the cell cytoplasm, for the manufacture of a pharmaceutical composition useful for causing inhibition or halting of transformed or non-transformed cell proliferation in a person or an animal, where an effective amount of the agent is administered in an essentially non-dissociated form to the person or animal. The use of the agent as an enhancer for other therapeutically active agents, and a pharmaceutical composition, are also disclosed.
